SUMMARY

Senior SDET / QA Automation Engineer with 11+ years of hands-on experience in functional and automation testing across UI and API layers. Strong background in designing and maintaining scalable automation frameworks (Java, Python, JS/TS), integrating test suites into CI/CD pipelines, and improving test reliability and developer feedback loops. Experienced in Agile/SAFe delivery models, test planning, and mentoring teammates to accelerate automation adoption.

TECHNICAL SKILLS

- **Automation Frameworks & Tools:** Selenium WebDriver (Java, Python), Playwright (Java, JS/TS), Cypress, Serenity BDD, TestNG, PyTest, Mocha, Cucumber (Gherkin)
- **API & Test Tools:** Rest Assured (Java), Requests (Python), Postman (Functional Testing with minimal JS scripting)
- **Languages:** Java, Python, JavaScript / TypeScript, VBA (Excel macros), SQL
- **CI / DevOps / Reporting:** Jenkins (job creation & pipelines), Git (GitHub / GitLab), CI integration, Allure/ Extent reports/ Serenity reports (framework reporting).
- **Test Management / Issue Tracking:** JIRA, Rally, HP ALM / QC
- **Other Tools / Platforms:** Perfecto Lab, Hexawise, Toad for SQL, MS-SQL Server, Oracle DB
- **Soft skills / Leadership:** Resource management, team mentoring, code reviews, cross-functional collaboration and test strategy

PROFESSIONAL EXPERIENCE

Senior Member Technical

Broadridge Financial Solutions

May 2021 – Present

- Architected and maintained hybrid automation frameworks using Selenium + Serenity BDD (Java, Cucumber) and Playwright + Serenity (Java) that increased automation coverage from 60% to 75% and reduced manual regression effort by approximately 32 hours per release, accelerating release validation by 40%.
- Optimized test execution with Jenkins pipelines and parallel runs, reducing full-regression runtime from 9 hrs. to 6 hrs. 45 mins (around 35% improvement) specific to ne app module and enabling gated nightly/PR builds for faster feedback to engineers.
- Improved test reliability and scalability by implementing data-driven and POM patterns with resilient wait/retry strategies resulting decreased flaky test rate and increased consistent pass-rate from 70% to 80%.
- Built and enhanced API automation suites with Rest Assured integrated to Selenium regression bed and Postman (including lightweight JS pre-request scripting) to validate functional resulting a systematic approach, increased reusability and around 50% effort saving.
- Developed reusable libraries and utilities in Java and Python to standardize test data setup and common test actions, automated DB validations using SQL and Toad.
- Reviewed and optimized team members' automation code; established coding standards, MR review checklists and setting checkpoints to reduce review cycles and improve code quality.
- Led test planning and execution for feature sprints (in-sprint automation) and maintained a robust regression pack for release validation; collaborated closely with product, development and performance teams on risk-based test planning and strategies.
- Enforced best-practice test design patterns across the team via code reviews, mentoring sessions and automation standards to improve reuse and maintainability.

Associate

Cognizant Technology Solutions

May 2015 – Apr 2021

- Designed, implemented and maintained Selenium WebDriver automation suites (Java) using TestNG and Cucumber BDD for Oracle-driven business flows; stabilized legacy UFT scripts and achieved an initial automation coverage of 45% across core modules.
- Managed test artifacts and execution using HP ALM / QC and Rally; supported SIT and UAT cycles, coordinated with business stakeholders on acceptance criteria, and used SQL-driven data setups to enable repeatable test runs and reduce setup time by 30%.
- Developed MS Excel VBA tools and SQL scripts to automate data generation, test-data setup, and result analysis to speed up test cycles and reduce manual effort.
- Debugged and enhanced automation scripts, improved script stability for Oracle-driven flows, and enforced best-practice test design patterns across the team.

PROJECTS

Fiduciary Advisory Platform - 2 years 10 months

- Single-point solution for investment advisors and institutions; responsible for functional and automation testing, report validation, and cross-system integration checks.

Trust Account Servicing Gateway - 2 years 4 months

- Consolidated multiple vendor systems into a single gateway for deposit and case management; owned regression automation and release validation.

Group Benefit Insurance - Policy Admin & Claims - 3 years / 2 years 9 months

- Tested business-critical web and Oracle applications for quoting, policy administration and claims processing; executed end-to-end test cycles and automation coverage for key flows.

CERTIFICATIONS

- Certified SDET Professional
- Selenium WebDriver with PYTHON from Scratch + Frameworks
- Rest API Testing (Automation) from Scratch-Rest Assured Java
- Playwright JS Automation Testing from Scratch with Framework

EDUCATION

- B. Tech (EEE) - Trident Academy of Technology (BPUT), Odisha - 2014 - CGPA - 7.35/10
- 12th Science - Dhenkanal Junior College (CHSC), Odisha - 2010 - Marks - 63.16%
- 10th - Deulbera Colliery Model High School (BSE), Odisha - 2008 - Marks - 81.75%
